Internet of Things course

For each project phase and on the day of the demonstration, students should clearly describe each group member's role and specify the tasks or activities each member performed.

This file should be sent along with the project code and should also be opened and accessible during the demonstration time.

Group name: Group-02 **Section name: 03** **Phase: 2**

Student name	Tasks and duties
#1 Farwah Bakhsh	Hardware - Configure both ESP32s with their own DHT11 sensors with Arduino code - Assemble DC motor circuit on breadboard and connect to RPi
#2 Karim Fahd	Frontend - Pull data from MQTT broker to render the temperature and humidity gauges - Design dashboard layout - Display fan status
#3 Jia-Yu Joy Ho	Backend - Build python code for email alert system to trigger when temperature exceeds thresholds - Build python code for user reply YES to turn on motor fan
#4 Aaron Hossain	Backend - Configure MQTT broker on RPi - Build Python MQTT subscriber code to capture sensor data
